Common IT Error Code Reference

Synthetic internal training document · Department: IT Support · Revision: 1.0

VPN-204

VPN-204: Corporate VPN gateway connection could not be completed in this synthetic guide. Check internet connectivity, Corporate profile selection, device date/time and VPN client logs. Contact Network Support if it continues.

PRN-001

PRN-001: Printer is unavailable or not responding. Check printer power, network connection and display warnings. Retry one test page and provide the printer name if it remains unavailable.

AUTH-401

AUTH-401: The application rejected the current sign-in session. Confirm the correct company account, check whether the account is locked, and sign in again through the approved identity page. Never ask the user to send a password.

NET- DNS-02

NET-DNS-02: Internal hostname lookup failed in this synthetic guide. Confirm VPN or corporate network connectivity and verify the hostname spelling. Send the hostname and timestamp to Network Support. Do not edit DNS settings manually.
