Ticket EX-1001 - printer offline

Employee reported printer PRN-FLR2 offline. Support confirmed the printer had power but its network cable was loose. Facilities re-seated the cable; employee printed a successful test page. Resolution: network cable restored. Reuse this summary only as an example, not as a diagnosis for other printers.

Ticket EX-1002 - VPN access

Employee received VPN-204 while working remotely. Network Support confirmed internet worked, verified the Corporate profile and collected client logs. The gateway team corrected a temporary access configuration. Resolution: VPN connected successfully. Do not assume every VPN-204 has the same root cause.

Ticket EX-1003 - locked account

Employee could not sign in after multiple failed attempts. Identity Support verified the employee through the approved process, unlocked the account and guided a self-service password reset. Resolution: access restored. No password was requested or stored by support.
