Managed Windows Update Guide

Synthetic internal training document · Department: IT Operations · Revision: 1.0

Check update status

Open Settings, choose Windows Update and review the displayed status. Keep the laptop connected to power during updates. Save work before restarting. Do not power off while the update screen says installation is in progress.

Update stuck

Record the update name, percentage and time elapsed. If the device remains at the same screen for an extended period, contact IT before forcing a shutdown. Include any displayed error code in the ticket.

Restart required

Schedule a restart when work is saved and the laptop is connected to power. After restart, reopen Windows Update and confirm whether the update completed.
