Browser Troubleshooting

Synthetic internal training document · Department: Workplace Technology · Revision: 1.0

Internal site will not load

Confirm the exact URL and whether the user is connected to the corporate network or VPN. Test another approved browser if available. Record the browser name, version and displayed error. Do not install unknown browser extensions.

Clear site cache

If the issue is limited to one site, use the browser settings to clear cached files for that site if the browser supports it. Be aware that clearing cookies can sign the employee out. Do not clear saved passwords.

Certificate warning

Do not bypass certificate warnings on internal sites. Capture the warning text and URL and contact IT Security or Network Support.
