Multi-Factor Authentication Guide

Synthetic internal training document · Department: Identity and Access · Revision: 1.0

Enroll a device

Open the approved identity portal and select security methods. Follow the enrollment steps for the company-approved authenticator. Confirm enrollment using the test prompt. Keep recovery codes in the approved secure location and never share them with support.

New phone

Before replacing a phone, add the new device through the identity portal while the old method is still available. If the old phone is lost, contact the identity support team for identity verification and recovery.

Unexpected prompt

Deny an authentication prompt that you did not initiate. Report the time and approximate location shown in the prompt. Change the account password using the official process if security support instructs you to do so.
